Revenue by Country

ROAS by Channel

RESULT & ACTION NOTES

- Email: highest efficiency at 11.41x ROAS and ~13.09 CPA.
- Google: 5.99x ROAS and ~5.13% CVR — strong acquisition candidate.
- Singapore: 11.95x ROAS and ~15.00 CPA — test whether efficiency holds at higher scale.
- TikTok: 2.30x ROAS and ~64.77 CPA — investigate creative, audience and landing-page performance before scaling.
- Action: shift/test budgets gradually; validate incremental ROAS, booking volume and statistical significance.

Key Results & Solutions

• Email — 11.41x ROAS and approximately 13.09 CPA: strongest efficiency. Use it as an efficiency/retention benchmark, but check incremental volume before scaling.

• Google — 5.99x ROAS and approximately 5.13% CVR: strong acquisition candidate. Increase budget gradually and monitor incremental ROAS and bookings.

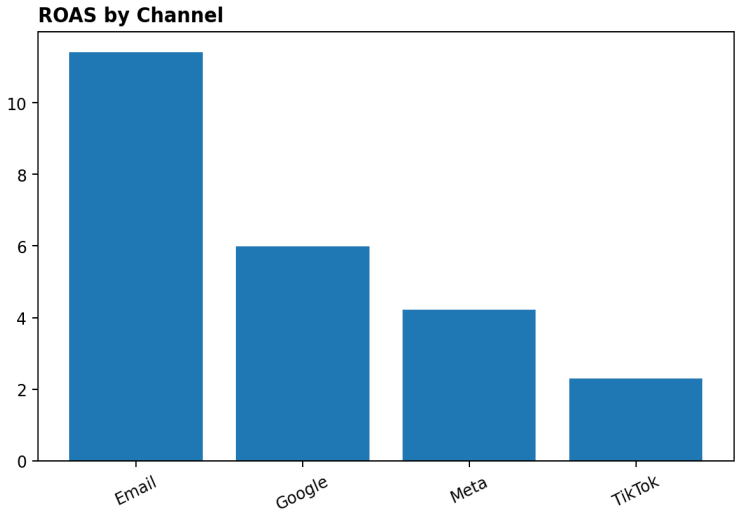

• Singapore — 11.95x ROAS and approximately 15.00 CPA: strongest market efficiency. Test whether the result remains strong at higher spend.

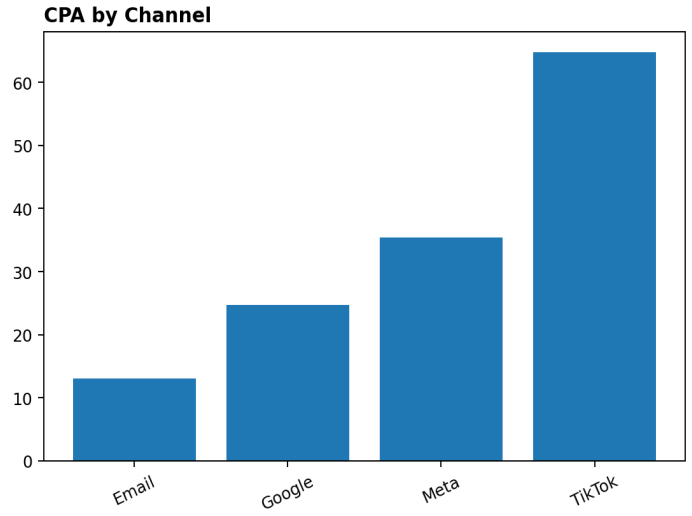

• TikTok — 2.30x ROAS and approximately 64.77 CPA: weakest efficiency. Investigate creative, audience targeting, landing-page experience and conversion tracking before cutting or scaling.

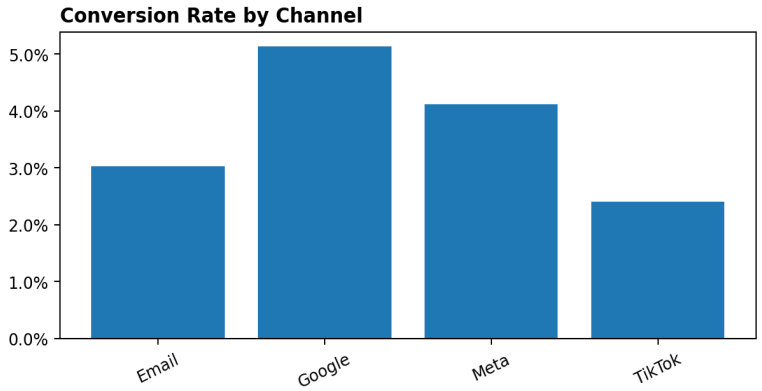

• Decision rule — avoid moving the entire budget based on one KPI. Evaluate ROAS, CPA, booking volume, incremental performance and statistical significance together.

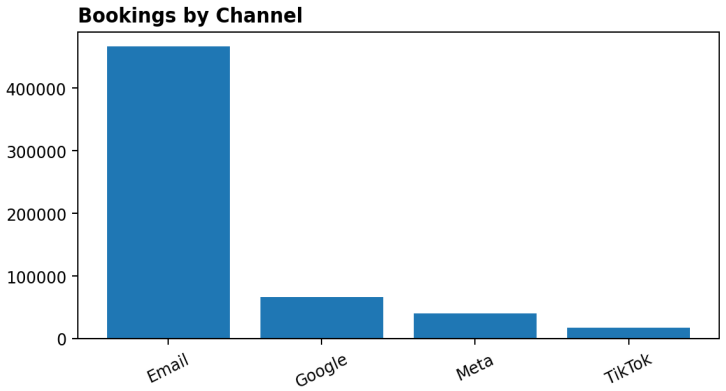

Channel Dashboard

CHANNEL PERFORMANCE

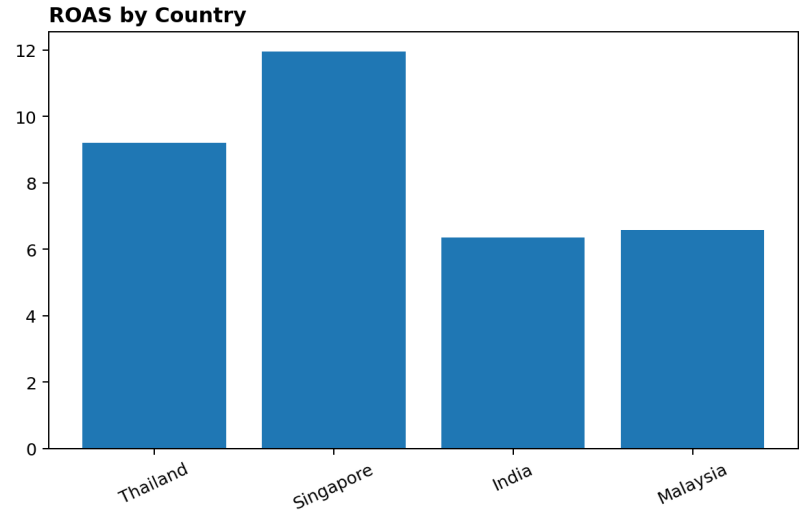

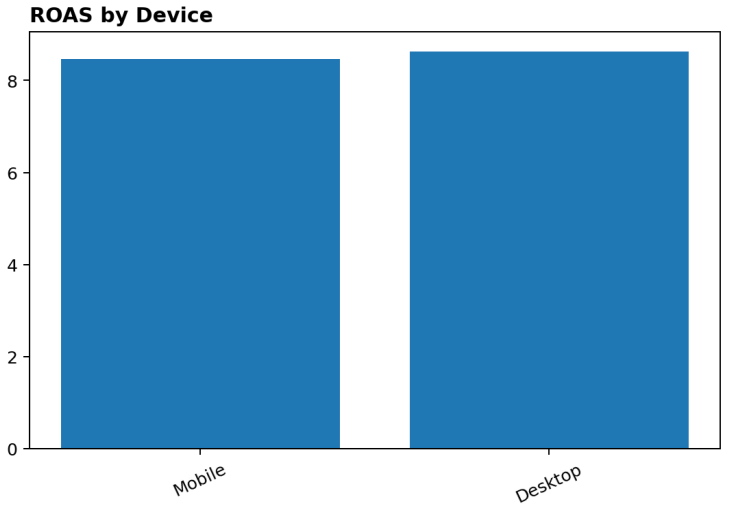

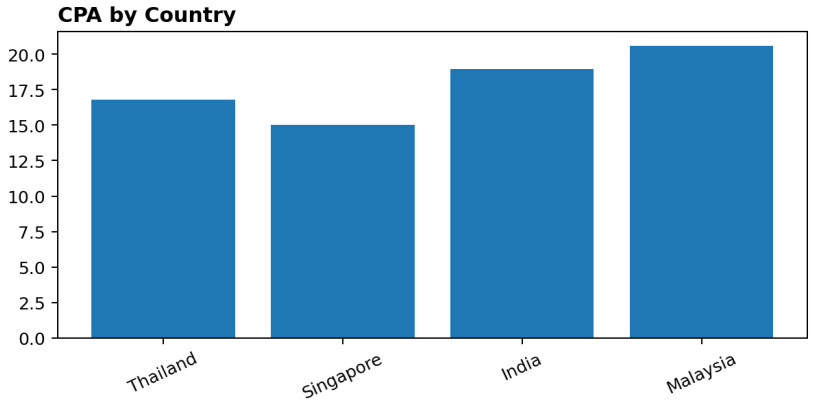

RESULT: Efficiency and scale are different. Email leads ROAS, while Google combines strong ROAS with much larger acquisition spend. SOLUTION: do not move the entire budget to the highest ROAS channel; test incremental budget and monitor marginal performance.

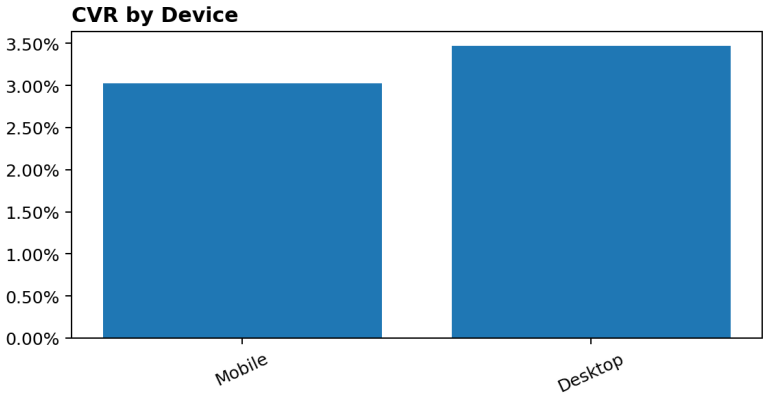

Market & Device Dashboard

MARKET & DEVICE PERFORMANCE

RESULT: Singapore is the strongest market by ROAS; device differences should be checked for UX, page speed, tracking and checkout friction. SOLUTION: validate the pattern by segment and sample size before changing country/device budgets.
